To the Talent Acquisition & Engineering Leadership at FullStack Connect

Subject: Application for Lead Software Engineer (Agile/Scrum Focus) — Remote

Dear FullStack Talent & Engineering Team,

I am writing to express my strong interest in joining FullStack Connect as a **Lead Software Engineer (Agile/Scrum Focus)**. I deeply admire FullStack's commitment to transparency, high-performance distributed engineering, and connecting top engineering talent with innovative global companies and Silicon Valley startups.

With a background in **Design & Cognitive Ergonomics (UniFBV)** combined with robust backend engineering in **Java 21 LTS, Spring Boot 3.3+**, and next-generation AI tooling (**Google Antigravity, Spring AI MCP, Vapi Voice AI**), I bring extreme ownership, architectural discipline (**Clean Architecture / Hexagonal Ports & Adapters**), and predictable Agile execution.

Key highlights of my engineering accomplishments include:

- NOVA Multi-Agent Ecosystem (Java 21 + Spring Boot 3 + Spring AI MCP):** Architected and developed a modular microservice strictly following Clean Architecture with decoupled domain logic, ACID file-based persistence, and native **Model Context Protocol (MCP)** tools for autonomous AI agent execution.
- Sofia Voice AI Outbound Agent (Infinit Tecnologia):** Engineered an autonomous voice agent on Vapi integrated with OpenAI GPT-4o-Mini, corporate RAG retrieval, and real-time asynchronous webhooks for automated B2B workflows.
- Quality & Engineering Discipline:** Built test-driven architectures with **JUnit 5 + Mockito**, established automated Python CLI scaffolding pipelines, and enforced RFC 7807 REST API error-handling standards.

Beyond backend engineering, I leverage an AI-assisted engineering mindset to accelerate delivery, paired with strong communication skills in **Professional Advanced English** and solid Agile/Scrum leadership practices (Sprint Planning, Code Reviews, Retrospectives).

I am eager to contribute to FullStack's mission and deliver high-impact results for your global client network.

Thank you for your time and consideration.

Sincerely,

Fábio Rodrigues

Lead Software Engineer
